

# SEL2

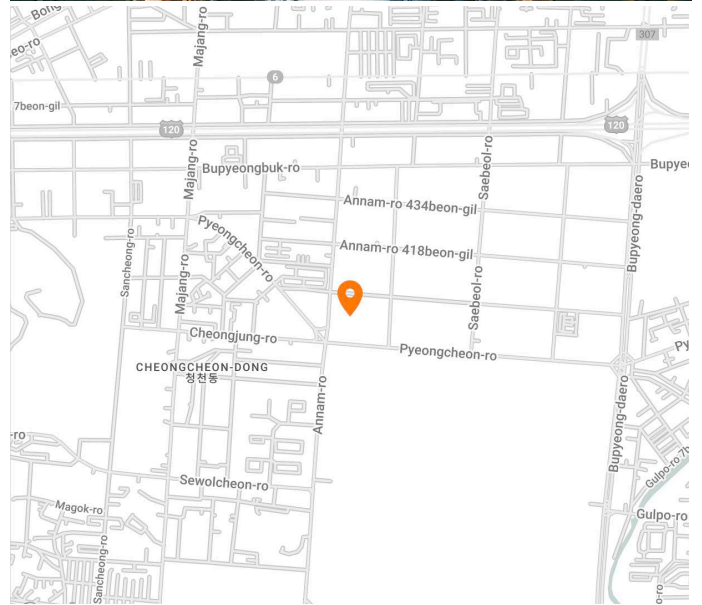

SEL2, Seoul

## 서울

We are proud to bring the next generation of digital infrastructure to South Korea with our new SEL2 facility, which when complete is expected to be one of the largest commercial data center projects in the country. Located in Bupyeong-gu, Incheon, it is well situated with easy access to Incheon International Airport and Seoul's major business districts via the Seoul-Incheon Expressway. This 120MW facility has been designed with Digital Edge's next generation architecture and is expected to achieve market leading PUE (Power Usage Effectiveness) and WUE (Water Usage Effectiveness), making it ideally suited for local and international cloud providers as well as other high power density applications. In addition SEL2 will be connected to our other carrier dense facility in Yeoksam (SEL1) via our Cross Link™ product and other third party telecommunication services, enabling us to offer customers at SEL2 a wealth of connectivity options from day one of opening. Complementing our existing presence in Seoul and Busan, SEL2 will further enhance our platform and offer customers access to an integrated digital ecosystem with world class performance.
